Monastir, Tunisia
[yassine-ben-romdhane.vercel.app](#)

SUMMARY

Software Engineer specializing in Full-Stack Development and Artificial Intelligence, with experience building scalable web and mobile applications and AI-powered systems. Skilled in developing LLM applications, RAG pipelines, intelligent recommendation systems, and real-time applications. Proficient in React, React Native, Node.js, Python, PostgreSQL, and modern AI technologies. You will find more info on my Portfolio.

EDUCATION

Engineering Prep Cycle (2021-2023)

École Supérieure Privée d'Ingénieurs
de Monastir (ESPRIM)

Engineering Cycle (2023-2026)

Engineering studies in Computer Science focused on building scalable software systems and AI-driven applications.

SKILLS

- Analytical thinking
- Cross-functional collaboration
- SCRUM methodology
- Problem solving
- Communication
- Project ownership

WORK EXPERIENCE

Wardrobe — AI Fashion & Community Platform (Ongoing)

- Developed an AI-powered wardrobe platform for clothing management, outfit generation, and personalized fashion recommendations
- Implemented AI-driven clothing analysis and outfit recommendations, integrating computer vision/LLM capabilities into the application.
- Built a personalized community feed using a score-based ranking system to recommend relevant content to users.
- Developed the platform's full-stack architecture and REST APIs for user management, wardrobe data, social interactions, and AI features.

AI/RAG Platform – Capgemini Engineering (PFE 2026)

- Developed an intelligent assistant for querying enterprise documentation using natural language.
- Built RAG pipelines with document parsing, embeddings, semantic search, and LLM integration.
- Designed backend services with FastAPI, PostgreSQL, and vector-based retrieval mechanisms.
- Implemented a scalable architecture combining React, Node.js, Python AI services, and containerized deployment.

Wave – University student App – YBIInnovations (2025)

- Developed a cross-platform mobile application for university students using React Native and Expo.
- Implemented core features including real-time chat, events management, and carpooling services.
- Engineered backend APIs with Node.js and database integrations using PostgreSQL and MongoDB.
- Optimized application performance, state management, and real-time communication with Supabase.

TECHNICAL SKILLS

Frontend

- React, React Native, Angular

Backend

- Express, Spring Boot, FastAPI

Databases

- PostgreSQL, MongoDB, Supabase

AI & Data

- Machine Learning, RAG, LLMs

Tools

- Git, Docker, REST APIs
